info@qwikresume.com | <https://Qwikresume.com>

Applies a thorough understanding of the technical concepts, practices and procedures and a general knowledge of industry standards and government regulations related to testing and transporting crude oil products to pipeline injection points.

JUNE 2014 - OCTOBER 2015

CRUDE OIL HAULER - ABC CORPORATION

- Load petroleum products into the transport by inspecting the transport for compliance with safety regulations, confirm the products to be delivered with dispatch and load the products safely.
- Responsible for sampling/testing to ensure product quality.
- Transported the product from the distribution facility safely. This entails conducting pre-trip and post-trip inspections, adjusting driving habits to road conditions and being able to position the transport at both load and unload sites. Upon arriving at the unloading site, drivers must inspect the transport and the surrounding areas, ensure that the tank at the site will be able to hold the product and ensure quality control.
- Met all regulatory requirements with all training modules, completion of all paperwork, and by complying with Marathon's safety rules and guidelines.
- Coordinated with the transport scheduling analysts to ensure that the correct products are being sent to the correct sites at the correct time.
- Troubleshoot issues and make minor repairs on the truck as necessary.
- Responsible for any relevant work as assigned by the Regional Transport Manager as necessary to support Terminal and Fleet Operations.
