## Exploration Geologist

### SUMMARY

As an experienced exploration geologist with a proven track record of finding and evaluating projects and deposits. Strengths are in mineral exploration, property evaluations, and project management. Also have worked extensively in target generation, geographic information systems (GIS), and computer applications.

### SKILLS

Mining Exploration, Geological Mapping, Geochemical.

### WORK EXPERIENCE

#### Exploration Geologist

ABC Corporation - 1998 - 1999

- Interpreted multiconventional and high resolution seismic to reconstruct the tectonostratigraphic evolution and defined the sequence stratigraphy.
- Performed operations of running rigs on execution team conducting vetting of rig locations and planning target zones for drilling.
- Monitored while drilling to ensure zoning and planning, as well as placement of perfs to frack rock for best oil and gas recovery.
- Served on a team with geophysicists, reservoir engineers, production engineers, and operations engineers to approve or deny rig work-overs and analyze marginal wells in assigned county.
- Conducted planning of re-fracks and searched for uphole potential in wells already drilled for re-completion to recover remaining reserves, allowing exposure to raster and digital good logs.
- Interfaced with the client and team to develop and value-engineer solutions you can build on
- Managed projects, budgets, scope, change orders and collections.

#### Exploration Geologist

Delta Corporation - 2004 - 2005

- First 21 years as a permanent employee, then 19 years as a consultant and the past 17 months as a permanent employee with Xodus.
- Over a decade of new venture opportunity analyses for small to large industrial clients and own companies; evaluated projects in various basins.
- Goal-oriented, solution-focused, fiscally competent with patient tutorial abilities from living in foreign working environments Ten years of managing.
- Geological and structural mapping underground approximately 15,000 meters of galleries, adits, pits, and exploratory mining works.
- Constructed and interpreted cross-sections and sub-surface maps from drill hole data and 3D PSDM seismic data to build and digitize 3D geologic models.
- Completed a 400+ infill and step-out drill hole plan for 2013 and communicated with a senior geologists in order to extend indicated resources.
- Supervised and instructed new hires and summer interns on geological and geotechnical core logging procedures and safe work practices.

### EDUCATION

M.S. in Geology
