WORK EXPERIENCE

Asst. Javascript Developer

ABC Corporation - June 2010 - December 2010

Responsibilities:

- Expanded into a web app that gave greater control over configuration and commissioning of solar panels, meters and pvs hardware.
- Implemented the database functions of the app that enabled the sharing of drawing canvass, similar to the way Google draw works but more robust in practice.
- Responded to issues raised through Github that were found by users of the tool.
- Actively traced and fixed bugs as they were discovered through testing.
- Debugged issues as they were discovered.
- Worked as part of a remote team, using Github to allowing us to implement features while keeping the master in a passing tests state.
- Optimized the web app for use on mobile devices including tablets and smart phones.

Javascript Developer

Delta Corporation - 2005 - 2010

Responsibilities:

- Application for Client developed Hardware.
- Rajesh played a role of JavaScript Developer at Trane (IR), La Crosse where he developed web application which reads the hardware data from EVOX Server via XML and displayed in the browser of the hardware developed by Trane.
- The hardware is the Touchscreen capability which displays the readings of the chiller based on the sensors value which is fetched by backend embedded software and provided as XML which then fetched by the EVOX Server by JavaScript and displayed in the browser using DHTML & CSS which is compatible with IE & Firefox.
- He also worked on the Testing (Manual & Automation) of the product developed with the Clients.
- Rajesh is the only JavaScript Developer who handled the Frontend Development of this project.
- Roles and Responsibilities Mr.
- Rajesh was responsible for the development of web application including the requirement analysis and design plan and the implementation using the JavaScript, XML, DHTML and CSS in the Trane (IR) project.
