

## Objective

Highly skilled Network Installer, responsible for Proposing solutions and alternate approaches to solving complex electro-mechanical network installation problems and tasks and seek engineering and supervisor support for clarification.

## Skills

Microsoft Office, Communication, Multitasking.

## Work Experience

### Network Installer

**ABC Corporation** - June 2008 – February 2008

- Conducted VTCs on each installation as well, capable of installing desktop VOIP phone installation.
- Traveled the country to set up and install Autobase (CRM) application and database Installed & troubleshoot Windows 2000 & 2003, Terminal Services, .
- Installed both data and fiber network cabling in corporate and government buildings.
- Tested and repaired data connections due to infrastructure failure.
- Performed installs of IBM PCs and Mainframe equipment for TXU.
- Provided general fabrication support on experimental apparatuses using standard machine tools, hand tools, soldering techniques, and test and measurement equipment.
- Utilized schematic drawings, parts list, and assembly drawings to convert moderately complex requirements into specific hardware deliverables and estimates independently, under general supervision.

### Network Installer

**Delta Corporation** - 2005 – 2008

- Maintained inventory of equipment.
- Ran data cable in a raised floor environment.
- Installation of fiber optic cables and amps to upgrade 3g to 4g services for cellphone Accomplishments I learned.how to prep fiber and install.
- At Mayo Medical Center, Installed network switches, using Cat-5 twisted pair and fiber optic cabling Updated online documents showing network changes.
- Wiring businesses for the internet, setting up router systems, ATM maintenance, computer and printer maintenance, etc.
- Capable of installing cable infrastructure such as Fiber optics, and copper, as well as the termination of both.
- Installs also include comm.
