PERSONAL STATEMENT

Senior Network Administrator/Lead Network Admin with more than 6 years hands-on experience providing a full range of IT management, virtualization services, server/desktop support, and others for multiple local offices, multi-national corporations, and government sites. Sound knowledge in Backup/Restore Cisco Routers and Switches IOS and config files using TFTP server

WORK EXPERIENCE

Senior Network Administrator/Lead Network Admin ABC Corporation - 2007 - 2008

Responsibilities:

- Converted multiple external branches from T1 VPN solutions to a Metro Ethernet WAN solution with Layer 7 QoS, decreasing costs and improving speeds tenfold.
- Implemented a single point of failure tape backup library solution increasing backup storage, speed, and reliability while decreasing overhead, maintenance, and cost.
- Engineered and implemented e-mail spam and web filtering solutions cutting spam and the cost of it by more than 90% while reducing employee time inefficiency due to non-work oriented web browsing using Barracuda and Exchange 2007.
- Replaced out-dated anti-virus software with a new solution providing excellent centralized protection with minimal cost and implementation time.
- Created a library of computer ghost images to optimize repair and new hardware deployment times.
- Reorganized existing data stores and imported existing personal stores from both servers and users systems to the central SAN ensuring data was easily accessible, secure, and part of the backup schedule.
- Managed vendor relationships for hardware and software to include Fidelity IFS, Digital Dimensions Inc, Dell, HP, SecureWorks, SafeSystems, Barracuda Networks, and Cisco.

Senior Network Administrator ABC Corporation - 2002 - 2007

Responsibilities:

- Assisted in the planning and building of a 120-node network that spanned five separate locations.
- Managed the East Coast network for Marine units under the Naval Training Command.
- Supervised and performed the repair, upgrade and maintenance of computing equipment, peripheral devices and the hardware and software required to support LAN/WAN operations.
- Managed the Technology Information Systems branch.
- Developed plans and budgets to provide direction and continuity during the modernization of existing equipment to meet future training
